EDUCATION

ABES Institute of Technology

Bachelor of Technology (B.Tech), Computer Science (AI Specialization)

Ghaziabad, India

Sep. 2023– Sep. 2027

Government Boys Senior Secondary School

Senior Secondary Education (CBSE)

Delhi, India

2023

PROJECTS

Nexus | *React, TypeScript, Node.js, WebSockets, Yjs, Redis, BullMQ, PostgreSQL*

March 2026 - Present

- **Engineered a real-time multiplayer digital workspace** leveraging a Conflict-free Replicated Data Type (CRDT) engine via **Yjs** and **WebSockets**, ensuring seamless, conflict-free state synchronization across multiple concurrent users.
- **Architected a high-performance backend infrastructure** utilizing **Redis** Pub/Sub for low-latency live presence ("Ghost Cursors") and **BullMQ** background workers to offload heavy export tasks, preventing main-thread blocking.
- **Optimized frontend rendering performance** by integrating **React Flow** and **React Virtuoso** within a Vite architecture, maintaining a butter-smooth 60 FPS experience while rendering and virtualizing up to 10,000 interactive canvas objects.

ReplayOS Platform | *React, Node.js, Express, PostgreSQL, Redis, OpenTelemetry*

January 2026 - March 2026

- **Architected a horizontally scalable, multi-tenant observability platform** implementing strict Role-Based Access Control (RBAC) and secure, isolated project environments.
- **Engineered an asynchronous telemetry processing pipeline** to ingest and parse massive (50MB+) raw log files in the background, eliminating main-thread blocking and maintaining high-throughput ingestion.
- **Integrated OpenTelemetry for distributed trace stitching**, automatically correlating fragmented microservice errors into interactive visual timelines and generating copy-ready automated postmortem reports to drastically accelerate root-cause analysis.

KMRL Document Hub | *n8n, React, MongoDB, Express, nodejs, webSocket*

November 2025 - December 2025

- **Architected a full-stack MERN application** featuring department-based access controls and cross-communication tools, effectively eliminating information silos and siloed awareness across KMRL.
- **Engineered automated data pipelines** using n8n to ingest documents from diverse sources (WhatsApp, Gmail, SharePoint), leveraging Gemini AI to generate and store automated summaries in MongoDB.
- **Integrated WebSockets** for real-time functionality, delivering instant updates on new documents and deadline-driven alerts, successfully reducing information latency and mitigating compliance exposure.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, C++, SQL (PostgreSQL), HTML/CSS

Frameworks: React, Node.js, Express.js, Tailwind CSS, Framer Motion, Vite, pandas, NumPy, Matplotlib, Yjs, Zod

Databases & Real-Time: PostgreSQL, MongoDB, Redis, WebSockets, BullMQ

Tools & Technologies: Git, Docker, Prisma ORM, OpenTelemetry, n8n, Gemini AI, Google Cloud Platform, VS Code, Visual Studio, IntelliJ, PyCharm
